

## **LINGO – IT SYSTEMS for Companies**

As a company LINGO deals with projects for middle-sized and small firms that use different software solutions and function at different levels of complexity. LINGO IT SYSTEMS engage in projects for those companies that deal mainly with trade, distribution, consulting, transport and production.

Each undertaking uses different software solutions created according to the individual needs and specifics of the clients.

We offer our solid skills, experience and enthusiasm in design and development of custom solutions which are dedicated and adjusted exactly to clients needs. Through analyzing business needs, industry and product requirements, we deliver tailored cost - competitive, scalable and robust solutions. Our software developers have experience and knowledge required to develop solutions that provide speed, security, and reliability that improve the productivity and efficiency in all aspects of the clients activity.

Up to now we have focused on planning, design and development of applications based on Microsoft technologies (.NET platform, particularly VB.NET, ASP.NET, C#.NET and database technologies as MS SQL Server 2005) and open source Sun Microsystems technologies (JAVA SE/ME/EE) in both distributed, centralized and enterprise applications. We also have considerable expertise in website development and web applications development (PHP, PHP5, MySQL, SQLite, XHTML, CSS, JavaScript).

### **Mobile software for traders**

MobiLingo is a system-application for POCKET PC and mobile phones equipped with Java system. It is meant for companies dealing with trading of different sorts of goods such as food, machines and electronic devices. The POCKET application cooperates with already existing store-accounting software.

MobiLingo provides mobile, reliable, and secure communication gateway between company headquarters and salesmen. Through making the information flow inside a company much faster and easier it improves the the productivity and efficiency of a everyday business routine.

System based on C#.NET and MS SQL Server 2005 (Pocket PC version) or JAVA ME / PointBase and MS SQL Server 2005 (cellular version)

### **Business Intelligence**

LINGO IT SYSTEMS also offers Business Intelligence systems. The main task of these products is to maintain order in the process of strategic and operational rapports, simplification of access, management of data gathered in the company and visualization which enables changing the data into required information and relevant decisions.

### **CRM Systems**

The major aim of the organization using CRM principle is taking care of their clients' satisfaction, trust and loyalty by using most of their purchasing potential through proper product and offer formation. System based on ASP.NET and MS SQL Server 2005.
